**Dream Molds**

# MULTI-GROOVE®

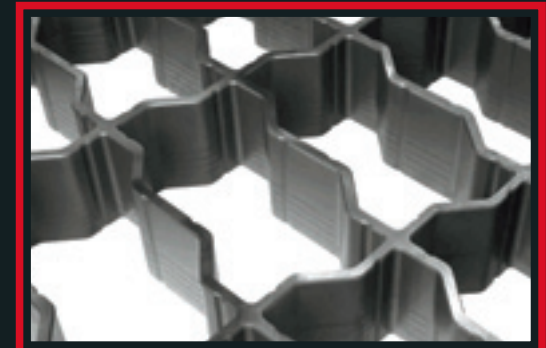

a machine milled, and hardened,  
„functional“ holding groove milled into  
the cavity walls of multilayer molds.

**Advantages:**

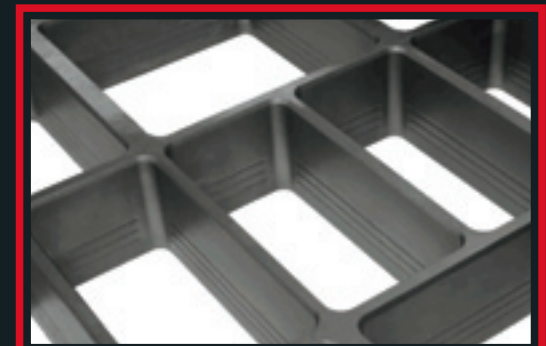

- Increased stone to cavity retention through the life of the mold ensuring easier production.
- Works especially well with larger heavier stone shapes/sizes.
- Eliminates costly time-consuming hand grinding.
- Increased mold life.

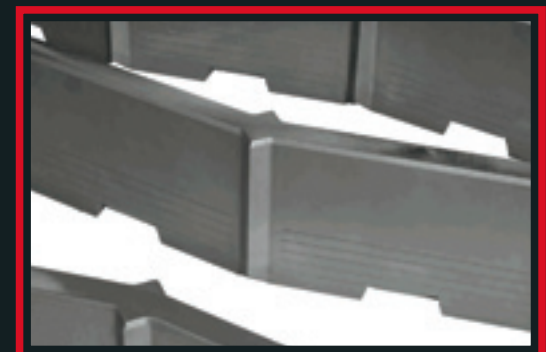

With the aid of MULTI-GROOVE®, Kobra Molds introduces POLYTEC® hardening to the Multi-Layer market. Our new MULTI-GROOVE® for Multilayer machines ensures increased stone to cavity retention while maintaining the highest possible mold life through our POLYTEC® hardening process.

Difficult shapes

Eliminates hand grinding

Increased retention on larger stones
