

SINGLEBOLT™

The single piece »Singlebolt™« plunger is the logical continuation of the KOBRA modular system. Its stability is achieved by the length, geometry and layout of the plunger sleeves within the tamper head, which ensure high wear resistance and a long service life.

Each KOBRA »Singlebolt™« is produced to specification and precisely mounted on the tamper head plate.

**DESIGN
WITH
MOLDS.**

Optimum pressure distribution is achieved by the arrangement of several sleeves on one plunger. The bolting of the tamper shoes enables them to be replaced easily.

**EXPERTISE
AT YOUR SIDE.**

TOOLS. Molds. Driven by knowledge.

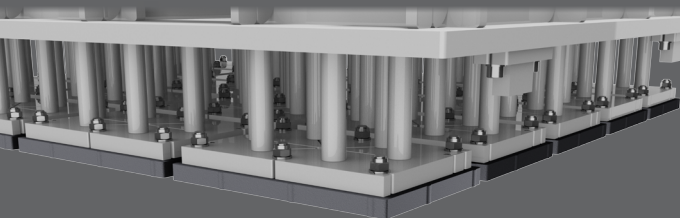

CARE. Service.

WE ARE
HERE FOR YOU.

Facts & advantages:

- » round plunger sleeves
- » standard and spare parts quickly available
- » no welds
- » short plunger – high stability

**KOBRA -
MODULAR SYSTEM.**
